SUMMARY	Frontend engineer with 6+ years of experience building web applications across fintech and consumer products, currently working on the frontend of William AI, an AI bookkeeping agent, in London. My experience spans AI applications, design systems, and research published in the ACM Digital Library. I particularly enjoy building maintainable frontend foundations that make products easier for teams to develop and evolve.
PROFESSIONAL EXPERIENCE	Frontend Engineer 2025 - Present Apron - Building the frontend experience for William AI, Apron's autonomous bookkeeping agent for accounting firms. - Improving shared frontend systems through design-system components, data-layer migrations, and frontend reliability improvements. - Led the frontend internationalisation work, establishing shared patterns and consistent standards across the codebase and preparing the product for future localisation. - Represented Apron at Accountex, speaking directly with accounting professionals about their workflows and bringing their feedback into product discussions. Frontend Developer 2022 - 2025 Inpay - Introduced React to the codebase, establishing the foundations for the migration from a Ruby on Rails frontend to a modern React-based application. - Built and evolved a shared React design system in Storybook, creating reusable components, design tokens, theming, and supporting utilities. The system was adopted and extended by the wider team over three years, with component test coverage established alongside it. - Built product features across payment processing, payment network configuration, and financial reconciliation workflows for a regulated cross-border payments platform. Frontend Developer 2022 IT University of Copenhagen - Developed the initial version of Write with LAIKA, an AI-powered creative writing assistant, building the frontend with React and TypeScript. - Built interfaces for AI-assisted writing workflows, collaborating with backend engineers on API integration and the presentation of generated content within the writing experience.

PROFESSIONAL EXPERIENCE

Frontend Developer

2019 - 2022

Too Good To Go

- Built core features for Too Good To Go's **merchant platform**, enabling food businesses across 15+ European markets to manage and sell their surplus food.
 - Developed the frontend experimentation framework and supported end-to-end A/B testing workflows, from implementing variants and analytics instrumentation to experiment rollout and cleanup.
 - Built partner-facing analytics dashboards, including sales performance and meals-saved insights, giving businesses visibility into their performance and food waste reduction impact.
-

PUBLICATION

Wikipedia Edit-a-thons and Editor Experience: Lessons from a Participatory Observation

- Presented at **OpenSym 2021**, the 17th International Symposium on Open Collaboration · September 2021.
 - Published in the ACM Digital Library · 15 October 2021
DOI: 10.1145/3479986.3479994.
 - Gluza, W., Turaj, I. A., & Meier, F.
-

EDUCATION

MSc in Information Technology (completed in three semesters)

2020 - 2022

Aalborg University Copenhagen

- Master Thesis: Development and Evaluation of a Chatbot Solution for Wikipedia Editors.

BA in Web Development

2019 - 2020

Zealand Academy

- Bachelor Thesis: Designing and Developing an Online Platform for an Illustration Artist: A Design Thinking Approach.

AP Degree in Multimedia Design and Communication

2017 - 2019

Copenhagen School of Design and Technology

- AP Thesis: Designing and Developing an SMS Communication Platform.
-

COMMUNITY & TEACHING

Piger i IT ("Girls in IT")

2020

Zealand Academy

- Delivered live coding sessions encouraging more women to pursue careers in technology, in collaboration with Zealand Academy.

Web Development Tutor

2019 - 2020

Copenhagen School of Design and Technology

- Returned after completing my degree to tutor and support students in web development.
