---

**SUMMARY**

Frontend Engineer with 7+ years of experience building web applications across fintech, consumer products, and AI. Currently building the frontend experience for William AI, Apron's autonomous bookkeeping agent for accounting firms, in London.

I enjoy working at the intersection of engineering, design, and product, with a particular interest in intuitive interfaces and maintainable frontend foundations. My experience spans AI applications, design systems, and products used by businesses across multiple markets.

---

**PROFESSIONAL EXPERIENCE**

**Frontend Engineer** 2025 - Present
Apron

- Building the frontend experience for **William AI,** Apron's autonomous bookkeeping agent for accounting firms.
- Improving shared frontend systems through design-system components, data-layer migrations, and frontend reliability improvements.
- Represented Apron at **Accountex**, speaking directly with accounting professionals about their workflows and bringing their feedback into product discussions.

**Frontend Developer** 2022 - 2025
Inpay

- Introduced React to the codebase, laying the foundations for the migration from a Ruby on Rails frontend to a modern React architecture.
- Built and evolved a shared React design system in Storybook, creating reusable components, design tokens, theming, and supporting utilities. The system was adopted and extended by the wider team over three years, with component test coverage established alongside it.
- Built product features across payment processing, payment network configuration, and financial reconciliation workflows for a regulated cross-border payments platform.

**Frontend Developer** 2022
IT University of Copenhagen

- Developed the initial version of **Write with LAIKA**, an AI-powered creative writing assistant, building the frontend with React and TypeScript.
- Built interfaces for AI-assisted writing workflows, collaborating with backend engineers on API integration and the presentation of generated content within the writing experience.

## PROFESSIONAL EXPERIENCE

**Frontend Developer** 2019 - 2022
Too Good To Go

- Built core features for Too Good To Go's **merchant platform**, enabling food businesses across 15+ European markets to manage and sell their surplus food.
- Developed the frontend experimentation framework supporting end-to-end A/B testing workflows, from implementing variants and analytics instrumentation to experiment rollout and cleanup.
- Built partner-facing analytics dashboards, including sales performance and meals-saved insights, giving businesses visibility into their performance and food waste reduction impact.

---

## PUBLICATION

**Wikipedia Edit-a-thons and Editor Experience: Lessons from a Participatory Observation**

- Presented at **OpenSym 2021**, the 17th International Symposium on Open Collaboration · September 2021.
- Published in the ACM Digital Library · 15 October 2021
  **DOI: 10.1145/3479986.3479994.**
- Gluza, W., Turaj, I. A., & Meier, F.

---

## EDUCATION

**MSc in Information Technology, Information Studies** 2020 - 2022
Aalborg University Copenhagen, Denmark (completed in 3 semesters)

- Master Thesis: Development and Evaluation of a Chatbot Solution for Wikipedia Editors.

**BA in Web Development** 2019 - 2020
Zealand Academy, Denmark

- Bachelor Thesis: Designing and Developing an Online Platform for an Illustration Artist: A Design Thinking Approach.

**AP Degree in Multimedia Design and Communication** 2017 - 2019
Copenhagen School of Design and Technology, Denmark

- AP Thesis: Designing and Developing an SMS Communication Platform.

---

## COMMUNITY & TEACHING

**Piger i IT ("Girls in IT")** 2020
Zealand Academy

- Delivered live coding sessions encouraging more women to pursue careers in technology, in collaboration with Zealand Academy.

**Web Development Tutor** 2019 - 2020
Copenhagen School of Design and Technology

- Returned after completing my degree to tutor and support students in web development.
